

Corporate Volunteer Management/Employees as Volunteers

VSys Live gives you an easy way to track how and when your employees volunteer in your community.

Highlights

- Employees can submit hours, comments, and job-specific metrics (e.g. trees planted, meals served).
- Create searchable listings of community opportunities.
- Calendars, news and suggested jobs e-mails.
- Job and event signup.
- Awards and recognition tools.
- Employees can manage and view their own histories and run reports with their own data.
- Capture employee feedback using integrated survey tools.

Benefits

Single sign-on: When an employee logs into VSys Live, if she isn't registered yet, she is created in VSys One *seamlessly* based on her Active Directory profile. This means that you don't need to pre-populate VSys with all of your employees, that's done automatically and as needed.

For employees already in VSys, their records can be updated every time they log in (name, address, e-mail, department, etc.) No need to "push" data from your HR system to keep the volunteer system updated.

Security: VSys Live can reside entirely within your IT infrastructure, no need to expose your employee data to any outside organization. Face VSys Live inwardly (your intranet), publicly or both – your choice.

Reporting: Use any of the 200+ reports in VSys to analyze your employees (and volunteers) quickly and easily. For example,

- Summarize volunteer hours and unique volunteers by department last year.
- Count and view all volunteers who participated in a particular type of project.
- Compare one department's hours against another.
- Report the value of all hours by corporate location, broken down by year and quarter.
- List the top employees in each department.

With VSys One's built-in analysis tools and flexible reporting system, the possibilities are endless.

Available Reports and Metrics (CSR-specific)

1. Counts of community organizations, both total and by types
2. Counts of volunteers
 - By employee type, division, department, role, geographic region
 - By demographic categories
3. Counts and totals of volunteer activities and hours
 - Total
 - By employee type, division, department, role, geographic region
 - By type of community organization
 - By activity type
 - By populations served
 - Differentiate among, company-sponsored paid (on company time), company-sponsored not paid (on personal time)
4. Volunteer frequency
5. Participation rates
6. Company-Paid Service Utilization Rates
 - Proportion of total volunteer hours from company paid/sponsored and non-company paid/sponsored events
 - Proportion of total volunteer hours occurring on company time and occurring off company time
7. Valuation of Volunteer Hours
 - Total
 - By employee type, division, department, role, geographic region

Customizable

VSys Live uses a flexible framework that's entirely modular, where the features and tools can be added, changed and arranged. VSys Live can be configured to use your own styles, look like your existing intranet, and set up to show only what you want to your staff. No unnecessary bells and whistles, but plenty of power where you need it.

Additional integration

The templates defined in VSys Live aren't fixed in stone: you can modify them yourself. That makes it straightforward to integrate VSys Live with your existing website or even embed VSys Live's functionality directly into your website.

The VOXI (VSys One eXchange Interface) API that forms the business logic layer for VSys Live can also be licensed to give you direct access to the "brains" of VSys Live.

VSys Live Optional Tools

VSys One Social Media Integration

The Social Media Integration module can automatically post news, praise and anything else to your social media accounts. On Facebook®, Twitter® and LinkedIn®: share awards and birthdays; post announcements, news items, other fun things. Have VSys One automatically post job needs, e.g. openings for specific jobs that remain unfilled.

VSys Live Volunteer Online Training

The volunteer online training module lets you present YouTube® videos to your volunteers, quiz those volunteers afterwards, and automatically score their responses. Passing grades become training records in VSys One so you know who's completed what trainings and when they need to be re-taken.

Custom CSS/Site Design

VSys Live comes with a standard template and CSS stylesheet that you or your web team can easily customize, no programming needed. If desired, we can develop a custom site design just for you to match your existing website interface.

System requirements

- VSys Live runs in a Server 2008R2 or Server 2012 environment. Requires 2GB memory, 2x CPU cores, 40GB disk for a single instance.
- Connects to your existing VSys One database (SQL Server).
- Works within your existing virtualization environment (VMWare, Hyper-V, etc.).
- No development or customization required.
