

VSystem Live is the volunteer *self-management* component for VSystem One

With VSystem Live, your volunteers can:

- Apply online using applications that you define.
- Search and sign up for volunteer opportunities, trainings and interviews.
- Update their personal information, including file uploads, digital signatures.
- Complete online volunteer orientations and trainings (optional module).
- Interact with your social media accounts (optional module).
- Manage and view their own histories and run reports with their own data.

Customizable

VSystem Live uses a flexible framework that’s entirely modular, where the features and tools can be added, changed and arranged. This means that your VSystem Live site can be very different from every other VSystem Live site, be styled with your branding and provide just the tools that you want to give to the volunteers.

Custom CSS/Site Design

VSystem Live comes with a standard template and CSS stylesheet that you or your web team can easily customize, no programming needed. If desired, we can develop a custom site design just for you to match your existing website interface.

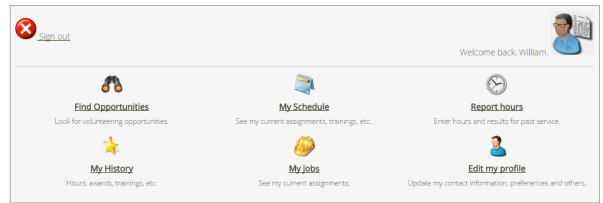

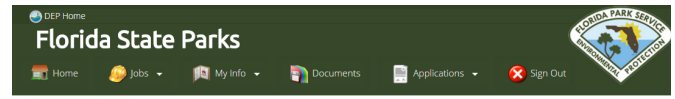

Advanced Forms

VSystem Live supports:

- Forms with decision trees (varying field visibility)
- Workflow rules
- External application approval
- Reference checks completed online by references via e-mailed link
- Secure messaging.

Employees as Volunteers

Want to help your employees get involved in the local community? Use VSystem Live for staff hours entry, self-run reports, suggested opportunities, awards and recognition. VSystem Live supports single sign-on using Active Directory, departmental and geographic splits, and our VOXI API can be used for advanced integration with your HR database.

Welcome to the Florida State Parks volunteer portal

Now that you have signed in, you can:

- Update your personal information using the [UPDATE PROFILE PAGE](#).
- [SIGN UP FOR JOBS](#), [CHECK MY SIGN UP JOB ASSIGNMENTS](#) or [ENTER HOURS](#).
- See your calendar with scheduled assignments, view your information such as hours, certifications, agreements, etc. on the [MY INFO PAGE](#).
- View any of your documents including your application and agreement on the [DOCUMENTS PAGE](#).
- Fill out any additional applications you may need using the "Applications" link above.
- For additional assistance please contact your volunteer coordinator.

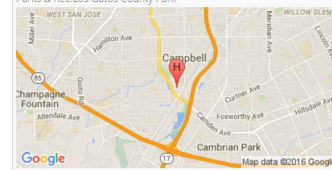

Thank you for your support of our Florida State Parks!

My Calendar Month July 2016 This Month

Sun	Mon	Tue	Wed	Thu	Fri	Sat
26	27	28	29	30	1 Canada Day	2

VSys Live Optional Tools

Additional Features

- Advanced notifications to volunteers, staff, external organizations.
- Outside hours approval (usually for volunteers working at offsite locations).
- AllForGood integration – show your volunteering opportunities on aggregator sites.

VSys Live Kiosk

Need to deploy a kiosk for check-in and check-out at multiple locations? VSys Live can present a kiosk in a web browser for easy use on almost any device.

VSys Live Volunteer Online Training

The volunteer online training module lets you present YouTube® videos to your volunteers, quiz those volunteers afterwards, and automatically score their responses. Passing grades become training records in VSys One so you know who's completed what trainings and when they need to be re-taken.

VSys One Social Media Integration

The Social Media Integration module can automatically post news, praise and anything else to your social media accounts. On Facebook®, Twitter® and LinkedIn®: share awards and birthdays; post announcements, news items, other fun things. Have VSys One automatically post job needs, e.g. openings for specific jobs that remain unfilled.

System requirements

- VSys Live runs in a Server 2008R2 or Server 2012 environment. Requires 2+GB memory, 2x CPU cores, 40GB disk for a single instance.
- Connects to your existing VSys One database (SQL Server, 2008R2, 2012 or 2014).
- Works within your existing virtualization environment (VMWare, Hyper-V, etc.).
- If externally-facing, requires customer-provided SSL certificates for security.
- No development or customization required.

Note that VSys Live doesn't exist on its own: this is the volunteer-facing part of the VSys One family. Your staff will still use VSys One (and possibly VSys Lite) for setup, reporting, and general volunteer management.

Multiple Sites on the Same Database

Maybe you have multiple organizational units or sites sharing the same volunteer database but each wants their own unique looking site for volunteers? Or want to give different tools to your student volunteers than you do to your senior volunteers? VSys Live lets you define multiple sites on the same database each with different available features and appearances yet all part of the same organization with reporting and analysis at the enterprise level.

Want to use VSys Live in-house only for specific tasks? Have two different versions of VSys Live, one for in-house use (e.g. job check-in/-out) and a public one for online applications and volunteer self-management.

Note that custom CSS, advanced forms and other optional tools are priced by quotation – not included in the base VSys Live package.

Save money and combine VSys Live with VSys Live Kiosk and the VSys Live Online Training module!
